SUMMARY

Senior Developer with 6+ years building performance-critical web applications, from a complex web-based audio-production studio to large-scale enterprise dashboards.

EXPERIENCE

Software Engineer @ Audiotool

JAN 2024 - PRESENT

- Built performance-critical web-based Digital Audio Workstation with real-time collaboration utilizing hardware acceleration serving 2M+ users
- Initiated and led team-wide effort to successfully identify and remove performance bottlenecks in the application, improving overall performance by 5x
- Led migration of Audiotool's music-sharing platform from in-house legacy framework to Svelte, improving response time and reducing bundle size by ~20%
- Optimized the middleware layer between the audio engine and UI, cutting feedback latency by ~35% and eliminating audio glitches during high-load sessions
- Implemented audio effects framework for Audiotool's WebAssembly-based audio engine in Rust

Software Engineer @ Red Hat

JUL 2021 - JAN 2024

- Built the React-powered dashboard for Red Hat's Trusted Application Pipeline(RHTAP) with a unified experience for managing DevSecOps routines in hybrid multi-cluster environments
- Implemented websocket-powered APIs and localized components as part of developer tooling for Red Hat's internal dynamic console plugin SDK
- Improved tooling for Red Hat's internal open source design system framework
- Mentored 4 new hires through onboarding, code-walkthroughs and pair programming

Associate Software Engineer @ Red Hat

JUL 2020 - JUL 2021

- Implemented a developer-centric customizable console dashboard for Red Hat's OpenShift container platform
- Built live resource tracking and metrics display for OpenShift operators including CI/CD pipelines, serverless workloads & observability metrics

Intern @ Red Hat

SEP 2019 - FEB 2020

- Developed an end-to-end demo application of OpenShift's Middleware stack
- Implemented CI/CD along with serverless auto-scaling deployments

Google Summer of Code 2019 @ Retroshare

MAY 2019 - AUG 2019

- Implemented a web interface for Retroshare from scratch, using Mithril.js and integrated into the Retroshare desktop client

SKILLS

Languages

Typescript, JavaScript, Go, Rust, Lua

Web

Svelte, React, Redux, Sass, Pixi.js, WebGL, WebAudio, gRPC

Cloud

Kubernetes, OpenShift, Helm, serverless(Knative), CI/CD(Tekton)

Tools & Platforms

Linux, Nix, Git, Docker, Figma

ACHIEVEMENTS

Top 10 - JS13k Game competition

2025

For creating a JavaScript + WebGL game in less than 13 kb

2nd Place - Fennel Game jam

2023

created a game using the Fennel lisp

Red Hat Developer Impact Award

2022

For significant contributions that have a high impact on products and customers
